

Poisson Process

$$T_n - T_{n-1} \sim \underline{\underline{\text{exp}(\lambda)}}$$

$$X_n = T_n - T_{n-1} \quad X_n \text{ are iid}$$

$$\underline{\underline{N(t)}} = \sum_n \mathbb{1}_{T_n < t}$$

- multiple events are negligible $t > z$
- $N(z, t) \sim N(z + \theta, t + \theta)$ $\forall \theta$
- $N(z, t)$ indep $N(z_1, t_1)$
 as long as $[t, t)$ and $[z_1, t_1)$
 do not overlap.

$$\lambda_{P_1} = \lambda_1$$

$$\lambda_{P_2} = \lambda_2$$
